1. Five power supply connectors (banana jack), J11 (3.3 V), J13 (3.3 V), J16 (Vss- for amplifier), J20 (5 V), and J12 (GND) on the EVM are used to connect the EVM with offboard dc power supply. It provides supply voltage for all devices on the board. A few options for using supply pairs are shown in Table 1.

EVM integrates the scope, schedule, and cost of a project. EVM answers a lot of questions to the stakeholders in a project related to its performance. EVM can be used to show the past and the current performance of a project and predict the future performance of the project by the use of statistical techniques.
