A Profit Model For Spread

profit model in order to formulate a general model that can be applied to spread trading regardless of the financial instrument. A stochastic process for the price spread and its first hitting time prob-ability density are employed. Then we modify this general profit model for spread trading so that

A profit model for spread trading with an application to ...

This article proposes a profit model for spread trading by focusing on the stochastic movement of the price spread and its first hitting time probability density. The model is general in that it can be used for any financial instrument. The advantage of the model is that the profit from the trades can be easily calculated if the first hitting time probability density of the stochastic process is given.
