Autoguiders are small sensor cameras that track stars so the astrophotographer can monitor drift alignment before taking their exposures.

### **Telescope Autoguiders | Astrophotography Autoguiders**

An autoguider is basically a camera that can either connect to your mount or a computer and tracks a specific star. When the selected star moves more than a specified amount away from the spot where it is supposed to be in the images the camera takes, it tells the mount to move a certain amount to keep that star dead in the center of the frame.
