BCPL is a procedural, imperative, and structured programming language. Originally intended for writing compilers for other languages, BCPL is no longer in common use. However, its influence is still felt because a stripped down and syntactically changed version of BCPL, called B, was the language on which the C programming language was based. BCPL introduced several features of many modern programming languages, including using curly braces to delimit code blocks. BCPL was first ...

BCPL changed somewhat from that time; its definition became clearer and the language more useful. But in observing the divergences, it's useful to record the precise point on the stem from which the B and then the C branch sprouted. Martin Richards's home page has links for obtaining a current version of a compiler and examples of the language.
