### Ecology Of Insect Vector Populations

The book examines the manner in which the inter-related problems of insect ecology, behavior, and population sampling have been explored over a wide range of investigations on disease vectors. The text focuses mainly on the study of blood-sucking dipterous insects such as tse-tse flies, mosquitoes, black-flies, and midges along with the appraisal of relevant studies on house-fly and blow-fly ...

During the establishment phase of a biological invasion, population dynamics are strongly influenced by Allee effects and stochastic dynamics, both of which may lead to extinction of low-density populations. Allee effects refer to a decline in population growth rate with a decline in abundance and can arise from various mechanisms. Strategies to eradicate newly established populations should ...

Insect pests are major constraints on agricultural and forestry production (Oerke 2006; Pureswaran et al. 2018), and their impacts are likely to increase in importance as the global human demand for food (Godfray et al. 2010), fiber, bioenergy feedstocks, and other renewable products continues to grow (Figure 1).The consequences of infestations are sizeable: pest species - mainly insects ...
