the differential equation can be written in the form of  $dy/dx = f(y)g(x)$  where  $f$  is the function of  $y$  only and  $g$  is the function of  $x$  only. Taking an initial condition, rewrite this problem as  $1/f(y)dy = g(x)dx$  and then integrate on both sides. Also, check: Solve Separable Differential Equations Integrating factor technique is used when the differential

A differential equation (de) is an equation involving a function and its derivatives. Differential equations are called partial differential equations (pde) or ordinary differential equations (ode) according to whether or not they contain partial derivatives. The order of a differential equation is the highest order derivative occurring.
