Introduction to Atoms. The simplest unit of an element is the atom. The atom is never broken down into smaller particles in chemical reactions. The relative mass of an atom is given by its atomic mass, which appears on the periodic table for each element. An amount of an element equal to its atomic mass in grams is one mole of the element.

Electrons give an atom its size Nucleus is made of protons and neutrons and these particles give an atoms its mass. Various types of Hydrogen (different isotopes) Hydrogen (protium) – 1 proton in nucleus Deuterium – 1 proton and 1 neutron in nucleus Tritium – 1 proton and 2 neutrons in nucleus.

A. Introduction to Chemistry, Atoms and Elements

They might associate chemistry with chemical equations. Thinking about how different things will react together to form other things. They might think about models of the different molecules that can be depicted different ways. They might associate it with the periodic table of elements. And all of these things are a big part of chemistry.

About Chemistry: Atoms First 2e. This text is an atoms-first adaptation of OpenStax Chemistry 2e. The intention of “atoms-first” involves a few basic principles: first, it introduces atomic and molecular structure much earlier than the traditional approach, and it threads these themes through subsequent chapters.

Preface - Chemistry: Atoms First 2e | OpenStax

The atoms-first version provides a more complete description of atomic theory, chemical bonding, and chemical calculations early. The chemistry-first version has a early emphasis on descriptions of the structure of matter and the nature of chemical changes, postponing the description of unit conversions and chemical calculations.

An ion consisting of a single atom is a monoatomic ion; an ion consisting of two or more atoms is referred to as a polyatomic ion. The positive electric charge of a proton is equal in magnitude to the negative charge of an electron; therefore, the net electric charge of an ion is equal to its number of protons minus its number of electrons.
