Antiphospholipid Syndrome

Antiphospholipid syndrome (APS) is one of those, but plenty of people with APS never have symptoms, and there are very good treatments for those who do. APS is a disorder that affects how your...

Antiphospholipid Syndrome: Symptoms, Diagnosis and Treatments

To confirm a diagnosis of antiphospholipid syndrome, the antibodies must appear in your blood at least twice, in tests conducted 12 or more weeks apart. You can have antiphospholipid antibodies and never develop any signs or symptoms. A diagnosis of antiphospholipid syndrome is made only when these antibodies cause health problems.
