2022 Ap Calculus Ab Free Response Solutions - List Exams

Limits describe the behavior of a function as we approach a certain input value, regardless of the function's actual value there. Continuity requires that the behavior of a function around a point matches the function's value at that point. These simple yet powerful ideas play a major role in all of calculus.

The correct answer is (A). Sensory pathways begin with the reception of sensory information, in which the stimulus is detected by sensory cells. The stimulus is converted to a change in the membrane potential of a sensory receptor during transduction. Nerve impulses transmit the sensory information through the nervous system via nerve impulses during transmission.
