### Artificial Intelligence A Guide To

Artificial intelligence (AI) is, at its core, the science of simulating human intelligence by machines. One definition is the branch of computer science that deals with the recreation of the human thought process. The focus is on making computers human-like, not making computers human. The goals of artificial intelligence usually fall under one of three categories: to build systems that think the same way that humans do; to complete a job successfully but not necessarily recreate human thought;
