Carbon Capture, Utilization and Storage (CCUS) is a set of technologies that capture carbon dioxide (CO<sub>2</sub>) emissions at source, preventing them from entering the atmosphere, or else directly from the air. The CO<sub>2</sub> emissions are then transported away and either stored deep underground or turned into useful products.

Many researchers believe that the process of carbon capture and storage can help us to get this number down to a healthy level. Carbon capture involves trapping the carbon dioxide at its emission source, transporting it to a storage location (usually

deep underground) and isolating it. This means we could potentially grab excess CO<sub>2</sub> right from the power plant, creating greener energy.
