Drip irrigation is the most efficient method of irrigation today. Drip irrigation (sometimes referred to as micro irrigation, low-flow irrigation, or trickle irrigation) is the slow and precise delivery of water directly to the plant roots. Drip irrigation is controlled either by hand or automatic timer.

Remember, when designing a drip irrigation system, design the system for the flow of water that will be required when the tree is fully mature. There are four common methods to use drip irrigation for a tree or group of trees: 1) run laterals down a row of trees with emitters placed on the lateral line at the
