Babbling is a stage in child development and a state in language acquisition during which an infant appears to be experimenting with uttering articulate sounds, but does not yet produce any recognizable words. Babbling begins shortly after birth and progresses through several stages as the infant's repertoire of sounds expands and vocalizations become more speech-like.

Babbling - Wikipedia

There is a difference between mental illness and autism and other developmental disorders. This distinction is sometimes referred to as an operation difference. ... it's known as a dual diagnosis. Often, once a diagnosis of autism spectrum disorder is made, symptoms of mental illnesses like anxiety and depression lessen due to greater self

Mental Illness vs. Autism | Operational Differences | Disorders

Psycholinguistics or psychology of language is the study of the interrelation between linguistic factors and psychological aspects. The discipline is mainly concerned with the mechanisms by which language is processed and represented in the mind and brain; that is, the psychological and neurobiological factors that enable humans to acquire, use, comprehend, and produce language.

Psycholinguistics - Wikipedia

Substance use disorders occur when the recurrent use of alcohol and/or drugs causes clinically significant impairment, including health problems, disability, and failure to meet major responsibilities at work, school, or home. The coexistence of both a mental health and a substance use disorder is referred to as co-
