Bill of quantities (BQ or BOQ) is prepared by the client's quantity surveyor or cost manager. The quantities are measured in number, length, area, volume, weight or time. BOQ helps to contractors get an itemized list of materials, equipment, and labour (with their costs) required to build new projects, maintain, or repair existing structures.

Measurement contracts (sometimes called "re-measurement" or "measure and value" contracts) contains a Bill of Quantities (BOQ) provided by the employer or its consultants, can be used in situations where the design (or type of works) can be described in reasonable detail, but the amount cannot.

#### What are the type of contracts? - Basic Civil Engineering

The bill of quantities shall fully describe the materials, proportions, workmanships and accurately represent the work to be executed. 6. In case of masonry (stone or brick) or structural concrete, the categories shall be measured separately and the heights shall be described as: From foundation to plinth level

TPM is an evolutionary Program Management and systems engineering tool that builds on the three parameters of (1) Earned Value Management (EVM) and (2) cost and schedule performance indicators and (3) the status of technical achievement. By combining cost, schedule, and technical progress into one comprehensive management tool, program managers ...

#### Technical Performance Measurement (TPM) - AcqNotes

In the unit quantity method, the work is divided into as many operations or items as are required. A unit of measurement is decided. The total quantity of work under each item is taken out in the proper unit of measurement. The total cost per unit quantity of each item is analyzed and worked out.

#### Construction Cost Estimating - Approximate and Detailed ...

Measurements are always characterized by uncertainty. Whether because of the possibility of instrument drift, the need to interpolate visually an instrument scale, or the difficulty of defining exactly what we wish to measure, we are never certain that the value of what we have measured is the "true" value of what we intended to measure.
