### Chemistry < University of Chicago Catalog

Biochemistry or biological chemistry, is the study of chemical processes within and relating to living organisms. A sub-discipline of both chemistry and biology, biochemistry may be divided into three fields: structural biology, enzymology and metabolism. Over the last decades of the 20th century, biochemistry has become successful at explaining living processes through these three disciplines.

Organic farming, in the European Union more commonly known as ecological farming or biological farming, is an agricultural system that uses fertilizers of organic origin such as compost manure, green manure, and bone meal and places emphasis on techniques such as crop rotation and companion planting. It originated early in the 20th century in reaction to rapidly changing farming practices.

Organic Chemistry Carbohydrates Nomenclature of Carbohydrates (the Fundamentals) While carbohydrates are not really any different from other organic molecules, they do have their own nomenclature of carbohydrates. Majorly, this is the result of the historic names given to many sugars. And as history would have it, those names kinda stuck and became the “norm” that you now need to know for ...

8.1 The Concept of Homeostasis. Homeostasis refers to the body's ability to physiologically regulate its inner environment to ensure its stability in response to fluctuations in external or internal conditions. The liver, the pancreas, the kidneys, and the brain (hypothalamus, the autonomic nervous system and the endocrine system) help maintain homeostasis.
