Regardless, the causal role of the organismic mediator, such as its architecture and operating characteristics, is taken as the proper focus of psychological science, rather than a functional relation between environmental circumstances and responses. A common name for the mediational approach is mediational S–O–R neobehaviorism.

Methodological Behaviorism from the Standpoint of a ...
A psychologic test is a set of stimuli administered to an individual or a group under standard conditions to obtain a sample of behavior for assessment. There are basically two kinds of tests, objective and projective. The objective test requires the respondent to make a particular response to a structured set of instructions (e.g., true/false, yes/no, or the correct answer).

The other two, while about servant leadership, did not test servant leadership directly. For example, Neill, Hayward, and Peterson (2007) used a pre-test and post-test to see if teaching servant leadership principles would increase inter-professional practice in aged care students. However, there was no control group included in the study.
