Human genetic variation is the genetic differences in and among populations. There may be multiple variants of any given gene in the human population (alleles), a situation called polymorphism. No two humans are genetically identical.

Human genetic variation - Wikipedia

Read Free Human Differences

In fact, DNA analyses have proved that all humans have much more in common, genetically, than they have differences. The genetic difference between any two humans is less than 1 percent. Moreover, geographically widely separated populations vary from one another in only about 6 to 8 percent of their genes.
