Bank Erosion as a Desirable Attribute of Rivers ...

Bottomland plant communities are typically dominated by the effects of floods. Floods create the surfaces on which plants become established, transport seeds and nutrients, and remove establish plants. Floods provide a moisture subsidy that allows development of bottomland forests in arid regions and produce anoxic soils, which can control bottomland plant distribution in humid regions.

Floods, flood control, and bottomland vegetation

Inland Flood Hazards: Human, Riparian and Aquatic Communities. Edited by E llen E. W ohl Cambridge: CUP, 2000, 498 pp. £70.00. ISBN 0 521 62419 3 Published around the time when much of Britain went under water, this volume serves as a timely reminder that flooding is universal. We are told the chilling fact that after hurricanes and earthquakes, floods are the third major cause of loss of ...
