Modeling an Equation. Let's take a look at how we can use algebra tiles to help us model and solve an equation. Let's take a look at the equation $2x - 4 = 10$. First, we are going to model this ...

How to Use Algebra Tiles to Model & Solve Equations ...

Explanation: . This is an exponential decay problem. Therefore, we can use this equation. is the animal population after the 7 years. is the animal population right now. is the decay of the animal population every year. is the time period of the animal populations decay. From the problem we know after the 7 years the animal population will be 80, so

Radioactive Decay Equations - Algebra II

The rule for expanding and dividing logarithms is that you can subtract the terms inside the log. In this case, the question is not asking for an actual number, but just what the expanded version would be. Therefore you separate the terms inside the log by subtracting the denominator from the numerator. Therefore the answer is

Adding and Subtracting Logarithms - Algebra II

The slope is the coefficient (the number being multiplied by the variable) in front of the x. In the first equation, the slope turns out to be -2, while in the second equation, the slope is -1.

Linear Dependence & Independence: Definition & Examples ...

For the iBT, you will answer a number of questions in Reading, Listening, Speaking and Writing. For the PBT, you will do Listening, Structure and Written Expression, Reading Comprehension and Writing. The iBT is longer, clocking in at around 200 to 250 minutes (including one 10-minute break).
