### **Easy Solution for LED installations and retrofits using 12VAC**

An LED is a type of diode that turns electrical energy into light. For those

that don't know, a diode is an electrical component that only works in one direction. Basically an LED is an electrical component that emits light when electricity flows through in one direction, from the Anode (positive side) to the Cathode (negative side).

### **Everything about LEDs: Basics of High Power LED Lighting**

It is a crucial piece to an LED circuit and to operate without one will result in system failure. Using one is very important in preventing damage to your LEDs as the forward voltage (V<sub>f</sub>) of a high-power LED changes with temperature. Forward Voltage is the amount of volts the light emitting diode requires to conduct electricity and light up.
