I used this book for my mechanical measurements class and my professor was constantly correcting errors in the book. Some of the errors were on the basic principle formulas of the section it was in. As an example a very fundamental equation of mechanical engineering, "Poisson's Ratio", was incorrect in this book.

Measurement is the process of comparing unknown magnitude of certain parameter with the known predefined standard of that parameter. For the measurements results to be accurate, two conditions should be met. Firstly, the standard which is used for comparison must be defined accurately and it should be universally accepted. The second important condition to be met for measurements is that the ...
