At first it looked like a bug, but when I dug deeper, I came across this snippet in the new MikroTik help docs ROSv7 Basic Routing Examples - RouterOS - MikroTik Documentation. As it turns out, the default behavior is to advertise all routes in the absence of an outbound filter. The next challenge was figuring out the new filtering syntax.

NetFlow is a feature that was introduced on Cisco routers around 1996 that provides the ability to collect IP network traffic as it enters or exits an interface. By analyzing the data provided by NetFlow, a network administrator can determine things such as the source and destination of traffic, class of service, and the causes of congestion.

The Insteon PLM or hub is known to break in about 2-3 years due to poorly sized capacitors. You can repair it yourself using basic soldering skills, search for "Insteon PLM repair" or "Insteon hub repair". Using the Insteon Hub 2014 in conjunction with other applications (such as the InsteonApp) is not supported.
