estimate the spectral density (also known as the power spectral density) of a random signal from a sequence of time samples of the signal. Intuitively speaking, the spectral density characterizes the frequency content of the signal. One purpose of estimating the spectral density is to detect any periodicities ...

returns the average power computed by integrating the power spectral density (PSD) estimate, p_{xx} . The integral is approximated by the rectangle method. The input, f , is a vector of frequencies corresponding to the PSD estimates in p_{xx} . The 'psd' option indicates that the input is a PSD estimate and not time series data.
