Health (RCPCH) and European Society of Paediatric Infectious Diseases (ESPID) – was used as initial reference for dosing recommendations. This handbook's dosing guide, with an online publication of June 2016, was used as an up-to-date reference with grading of pharmacokinetic evidence within its development.

Antibiotic Dosing for Children: Draft expert ...

Step 1. Calculate the dose in mg: $18 \text{ kg} \times 100 \text{ mg/kg/day} = 1800 \text{ mg/day}$
Step 2. Divide the dose by the frequency: $1800 \text{ mg/day} \div 1 \text{ (daily)} = 1800 \text{ mg/dose}$
Step 3. Convert the mg dose to mL:

AMH Children's Dosing Companion

This book is designed to be a practical and convenient guide to the dosing and usage of medications in children.

Pediatric doses vary with the age, weight, surface area and disease, etc.

Overdosing may lead to side effects and under-dosing will lead to unsatisfactory response or development of resistance in cases of antibiotics.

Pediatric Drug Doses 2nd Edition PDF

Most drugs in children are dosed according to body weight (mg/kg) or body surface area (BSA) (mg/m^2). Care must be taken to properly convert body weight from pounds to kilograms ($1 \text{ kg} = 2.2 \text{ lb}$) before calculating doses based on body weight.

Pediatric Dosage Calculations | Davis's Drug Guide

10mg/kg on day 1, then 5mg/kg days 2-5. Weight based dosing: 10mg/kg on day 1, then 5mg/kg on days 2-5. Sulfamethoxazole / Trimethoprim Strength. 200mg/40mg / 5ml 6-13mg/kg/day. based on TMP.
