Engineering, the application of science to the optimum conversion of natural resources to the uses of humankind. Engineers employ two types of natural resources—materials and energy. Engineers must concern themselves with the continual development of new resources as well as the efficient use of existing ones. This course will allow the student to develop a more in depth knowledge of physical metallurgy and its application in understanding and solving relevant manufacturing problems. It will begin with a treatment of solid-state diffusion, mass transport and the principles of solidification including constitutional supercooling.
