Anatomy. The scapholunate ligament is an intraarticular ligament binding the scaphoid and lunate bones of the wrist together. It is divided into three areas, dorsal, proximal and palmar, with the dorsal segment being the strongest part. It is the main stabilizer of the scaphoid. In contrast to the scapholunate ligament, the lunotriquetral ligament is more prominent on the palmar side.

Scapholunate ligament - Wikipedia

Dr. O'Brien has also been actively involved in research throughout his career. He has authored 24 book chapters and 117 peer-reviewed or review articles on numerous topics within sports medicine and orthopaedics. Currently, his research interests have focused on an algorithm he developed for the diagnosis and treatment of biceps-labral disorders.
