### INSTALLATION MANUAL - Radiant solar

A solar water heater uses energy from the sun to heat water. A solar water heater works on two basic principles. Firstly, dark objects absorb more heat than light ones and secondly, when water gets hot it rises due to density differences between hot and cold water (thermo siphon effect). A solar water heater comprises three main parts: the collector, the storage tank and an energy transfer fluid.

### Solar Water Heater Installation Guide - cityenergy.org.za

The controller should be located in close proximity to a 115 volt electrical receptacle. The storage tank should not be placed directly on an un-insulated floor or concrete slab. The tank should be placed on a well insulated pad with a minimum R-value of 10. A 2" rigid polystyrene insulation pad is a good solution.
