Cells are the building blocks for the body and they are made of the cell membrane, nucleus, and cytoplasm. The cells in the human body are tasked with assisting in functions such as metabolism, transportation, and secretion of substances. So, if you have a good ...

Cell Structure And Function Quiz With Answers - ProProfs

On one side of the heme group is the proximal histidine, which binds the Fe²⁺ of the Heme to the nearby globin. It helps stabilize the position of the attached Heme. The distal histidine, which is not bound to the heme, helps prevent oxidation of Fe²⁺ to Fe³⁺. Oxygen does not bind to Fe³⁺.; Because it has four subunits, a hemoglobin molecule can reversibly bond with up to four O₂ molecules.
