DF25 V Twin problems - Suzuki Outboard Forum

This 25-hp model is the first Suzuki 4-stroke outboard to feature a V-Twin powerhead. The 70° V-Bank angle is wide enough to minimize vibration without the use of a counterbalance system, and narrow enough to provide a compact profile on the transom. The V-Twin layout also moves the center of gravity forward compared to an inline powerhead.

I have a 2006 Suzuki DF 25 four stroke V twin. The problem I have is that when in gear accelerating from idle to a higher engine speed the motor hesitates and cuts out. If I am quick enough to work the throttle back and forwards a few times and pick a few revs up it will get through the hesitation and pick up to full throttle.

I have a 2006 Suzuki DF 25 four stroke V twin. The problem ...

last year I bought a new DF25 v-twin. The motor performs well with one exception. Be it hot or cold, since the day I first got the engine, it's had a hesitation when advancing the throttle from low RPM. It has been manageable, but now it starting to bother me a bit. I'm concerned as time goes on this will be a stall point for the engine.
