The design, analysis and optimisation of these complex systems require a multi-disciplinary approach. Multidisciplinary design, analysis and optimisation (MDAO) is an engineering field focussing on the use of numerical tools for the design of systems involving a number of disciplines or sub-systems.

This course develops the fundamentals of feedback control using linear transfer function system models. Topics covered include analysis in time and frequency domains; design in the s-plane (root locus) and in the frequency domain (loop shaping); describing functions for stability of certain non-linear systems; extension to state variable systems and
