"A spacious and beautiful book, as much a lesson for adults on visual enrichment and nurturing a creative spirit as an introductory biography for children."

The Iridescence of Birds: A Book About Henri Matisse ...

The title springs from Matisse's love of pigeons. He was fascinated by their "sharp eyes" and "red feet." And he particularly loved watching their colors change as they moved—the titular "iridescence." Raising pigeons, it seems, was the perfect pastime for this quiet, color-loving boy who would become a brilliant painter. Glorious.

THE IRIDESCENCE OF BIRDS by Patricia MacLachlan , Hadley ...

Iridescence: and the Birds-of-Paradise. Iridescent feathers appear black or dull one moment, then flash into glittering color as light hits them at just the right angle. The colors are produced as the feather's microscopic structure reflects some colors while eliminating others.

Iridescence: and the Birds-of-Paradise | Bird Academy ...

The results showed that the birds required on average about four pecks to catch an "iridescent" dot, compared to about 2.5 pecks to catch the solid-colored dot. Furthermore, when the birds missed, they did so by a larger margin than when trying to catch the color-changing dots.

Survival Of The Shiniest: Iridescence And Defense In ...

Iridescence (also known as goniochromism) is the phenomenon of certain surfaces that appear to gradually change color as the angle of view or the angle of illumination changes. Examples of iridescence include soap bubbles, feathers, butterfly wings and seashell nacre, as well as certain minerals. It is often created by structural coloration (microstructures that interfere with light).

Iridescence - Wikipedia

The Iridescence of Birds : Patricia MacLachlan : 9781596439481

Easily one of the most stunning examples of birds with iridescent plumage, the male Himalayan monal's plumage is made up of twelve different iridescent colors. It's no wonder it's the national bird of Nepal. This pheasant resides in the high-altitude forests of the Himalayan Mountains.

Iridescent Birds | The Garden and Patio Home Guide

Iridescence is a visual characteristic attributed to surfaces that change in colour with viewing angle. The term derives from the Latin and Greek 'iris', meaning rainbow, and also refers to Greek goddess Iris, who is the personification of the rainbow and a messenger to the gods (Barnhart & Steinmetz 1988).

Iridescence: a functional perspective

Purple Gallinule: Medium, chicken-like marsh bird with purple-blue upperparts washed with iridescent green, deep blue underparts. Forehead is pale blue; bill is red and yellow-tipped. Undertail coverts are white. Legs are yellow with very long toes. The flight is labored and slow with dangling legs.

The Iridescence of Birds A Book About Henri Matisse

Iridescence describes a color that isn't any one color. You see it in soap bubbles, bird feathers, butterflies — even in reptiles, like this common dotted garden skink in Sri Lanka. You also may see it in the occasional sports car paint job. Photo Credits: Karin Kjernsmo

Inside the Secret World of Iridescent Animals | Discover ...

The brilliant iridescent colours of the peacock's tail feathers are created by structural coloration, as first noted by Isaac Newton and Robert Hooke. In living creatures, structural coloration is the production of colour by microscopically structured surfaces fine enough to interfere with visible light, sometimes in combination with pigments.

Structural coloration - Wikipedia

Groove-billed Ani: Medium-sized black bird with iridescent blue and green overtones, with a very long tail (half the length of the bird). Bill is huge, with arched ridge and narrow grooves. Feeds on insects, ticks, spiders, lizards, fruits, berries and seeds. Flies low to the ground.
