decide which of the 3
bases to use. Just
remember that base
and height are
perpendicular.
Therefore, the base is
'11' since it is
perpendicular to the
height of 13.4. To find
the area of the triangle
on the left, substitute
the base and the
height into the formula
for area.

Triangles Rules.

Triangles is a very simple game. The objective is to make as many triangles as possible, by drawing lines from one dot to another. Players take turns, in each turn a player must draw one line. A line may not cross other lines or touch other dots than the two that it's connected to.

For example, divide an isosceles triangle into two congruent right triangles. Step 6: Decide whether you will need the Pythagorean theorem, sine, cosine or tangent. Step 7: Check that your answer is reasonable. The hypotenuse is the longest side in a right triangle. How to use Cosine to calculate the side of a right triangle?

unmarked straightedge
and a compass.

Angle trisection - Wikipedia

Note there is only one
answer in this case.

The "12.4" line only
joins up one place. The
other possible answer
for L is 149.9° . But that
is impossible because
we already have $M =$
 125° and a triangle
can't have two angles
greater than 90° ..

Conclusion: When

Solution
Condition on the sides.
The triangle inequality states that the sum of the lengths of any two sides of a triangle must be greater than or equal to the length of the third side. That sum can equal the length of the third side only in the case of a degenerate triangle, one with collinear vertices.
