Using Egocentric Networks To Understand Communication

Egocentrism refers to someone's inability to understand that another person's view or opinion may be different than their own. It represents a cognitive bias, in that someone would assume that others share the same perspective as they do, unable to imagine that other people would have a perception of their own.

A simpler egocentric betweenness measure is the number of pairs of nodes (not involving ego) in the egocentric network that are not directly connected to each other (and, therefore, are indirectly connected via a geodesic through ego); this simpler measure is, in essence, the reverse of egocentric network density: $\sum_{j \in A, j \neq i} N_i \sum_{k \in A, k \neq i} j-1 [1-a(p, j, p, k)]$ The egocentric analog of Freeman's betweenness measure additionally takes account of the fact that some ...
