MyZemax.com gives you access to a wide range of resources and tutorials, as well as support from peers and Zemax experts. This video will help you get the most out of what's on offer, so you can be more successful, sooner.

Getting started with OpticStudio - Zemax

Although ZEMAX is easy to use, optical system design is a very broad area of engineering. This guide is intended to get you started using ZEMAX quickly. It is the first place to start if you are new to ZEMAX, or if you are returning to it after having not used ZEMAX for some time. You may learn something even if you have used ZEMAX for many years!

OpticsViewer can open any sequential.ZMX or.ZAR file. This allows users to look at the optical system, perform analyses, create drawings, and view the optimization and tolerancing criteria used by the optical designer. In this tutorial, you will learn to load sequential files and view design data, including design targets and tolerance ranges.

To do this, ZEMAX uses a spreadsheet format called the Lens Data Editor (LDE). Upon opening ZEMAX, a blank LDE will appear within the main ZEMAX window. The main ZEMAX window has a large blank area, with a title bar, menu bar, and toolbar at the top. The LDE is the primary spreadsheet where the majority of the lens data is entered.

Zemax perturbs each of the specified degrees of freedom in the minimum and maximum direction and measures the change in the criterion you set (discussed below). This difference can be calculated as either a Root-Sum-Square (RSS) change or a Linear Change. Criterion This is where you specify what Zemax looks at when it does the tolerancing.

As mentioned in last section, although Zemax is already very powerful in optical design, there are times the designer needs to further extend its functions to fit some special design needs. Therefore, Zemax provided a tool called Zemax Programming Language (ZPL) to allow users to write their own procedures. ZPL is a macro language specifically...
